

POWER PROTEIN WHEY

**EMPOWERS
PERFORMANCE**

Clinical Applications

- Supports Healthy Body Composition*
- Supports Immune Health*
- Supports Normal Muscle Recovery Following Exercise*
- Supports Gastrointestinal Health*
- Contributes to Macro-Nutrition*

*Power Protein Whey represents an extraordinary breakthrough in body composition/weight management functional food formulas. Our medical board of advisors' primary objective in researching and developing Power Protein Whey was to find a pure source of quality whey protein that is free of genetically-engineered hormones (rBST and rBGH) which, though banned in other countries, are used in the United States dairy industry. There are growing concerns regarding the effects of these hormones, especially in early puberty.**

All Empowers Performance Formulas Meet or Exceed cGMP Quality Standards

Discussion

New Zealand Biosciences™ Proprietary Whey Protein Blend (NZ whey protein concentrate, L-glutamine, glycine, and taurine) is sourced from New Zealand, which is known for its highly strict dairy processing standards. Guaranteed 100% pure (hormone free), this high-biological-value whey protein concentrate contains a rich array of essential and non-essential amino acids. Whey protein is considered the “gold standard” of protein for serious athletes. Research suggests that it supports healthy body composition, retention of lean muscle mass, glucose metabolism, satiety, and gastrointestinal health.^[1-5] Its roles in the maintenance of blood pressure and blood lipid levels already within the normal range are also areas of interest.^[3,5] As a rich source of the sulfur-containing amino acids cysteine and methionine, whey protein can enhance immune function through intracellular conversion to glutathione.^[3] Whey protein also delivers high levels of naturally occurring bioactive immunoglobulins that are resistant to peptic digestion. Immunoglobulins from whey have been observed to support intestinal immunity and a healthy response to inflammation.^[3,4] Furthermore, whey protein has displayed lower allergenicity than casein.*^[6]

Glutamine and Glycine, in combination with the cysteine-rich whey protein, promote glutathione synthesis and combat free radicals. Glutamine, crucial in nitrogen metabolism, is important for replenishing amino acid stores, especially after exercise or stress.^[7,8] This amino acid aids in intestinal cell proliferation, thereby helping to preserve gut barrier function and intestinal health.^[8] Glycine, an inhibitory (calming) neurotransmitter, is vital as a constituent of collagen and a building block for other substances such as coenzyme-A, nucleic acids, creatine phosphate, purines, bile, and other amino acids.*

Taurine, as a derivative of sulfur-containing cysteine, has many healthful clinical applications, including the support of stable cell membranes, cardiovascular health, glucose tolerance, detoxification, and bile salt synthesis.*^[9]

Aminogen® is a patented, natural, plant-derived enzyme system. It promotes protein digestibility and amino acid absorption, thereby boosting nitrogen retention and aiding in the synthesis of muscle mass and strength, as well as promoting deep muscle recovery.*^[10]

Medium-Chain Triglycerides provide a rapidly absorbed, easily metabolized, and quick form of energy.

Beneficial Macronutrient Ratio In every serving, Power Protein Whey provides 21 g of high-quality whey protein; 3 g of fat, including 0.5 g from medium-chain triglycerides; and 11-13 g of carbohydrate, including 6-8 g of fiber. This composition supports a healthy balance of macronutrients and fiber. High-fiber foods tend to slow the absorption of glucose into the bloodstream.^[14] Furthermore, both fiber and protein tend to increase feelings of satiety.*^[14,15]

Added Sugar- and Stevia-Free Power Protein Whey is free of both added sugar (including fructose) and stevia, and is sweetened only with monk fruit extract. Animal and human research suggests that consuming fructose-containing beverages increases visceral adiposity.^[16,17]

* The % Daily Value (DV) tells you how much a nutrient in a serving of food contributes to a daily diet. 2,000 calories a day is used for general nutrition advice.

INGREDIENTS: New Zealand Biosciences™ proprietary whey protein blend (whey protein concentrate, taurine, L-glutamine, glycine), inulin (from chicory), natural flavors (no MSG), sunflower oil, medium-chain triglyceride oil, cellulose gum, xanthan gum, Aminogen® (proprietary plant enzyme blend), guar gum, sea salt, monk fruit extract, and tripotassium citrate.

CONTAINS: Milk (whey protein concentrate).

Aminogen® is a registered trademark of Innophos Nutrition, Inc. Aminogen® is protected under U.S. patent 5,387,422.

Directions

Mix two scoops (38 g) in 8-12 oz cold water and consume. Adjust amount of water according to thickness desired. May be used as a snack, a “rescue” food, an occasional meal replacement, or as directed by your healthcare practitioner.

Consult your healthcare practitioner prior to use. Individuals taking medication should discuss potential interactions with their healthcare practitioner. Do not use if tamper seal is damaged.

Warning

Very low calorie protein diets (below 400 Calories per day) may cause serious illness or death. Do Not Use for Weight Reduction in Such Diets Without Medical Supervision. Not for use by infants, children, or pregnant or nursing women.

Does Not Contain

Wheat, gluten, yeast, soy, fish, shellfish, peanuts, tree nuts, egg, artificial colors, artificial sweeteners, or artificial preservatives.

Typical Amino Acid Profile Per Serving:

Alanine	1,110 mg	Methionine	530 mg
Arginine	570 mg	Phenylalanine	710 mg
Aspartic Acid	2,330 mg	Proline	1,340 mg
Cysteine	590 mg	Serine	1,110 mg
Glutamic Acid	3,800 mg	Taurine	500 mg
Glycine	470 mg	Threonine	1,530 mg
Histidine	400 mg	Tryptophan	500 mg
Isoleucine	1,450 mg	Tyrosine	730 mg
Leucine	2,350 mg	Valine	1,320 mg
Lysine	1,910 mg
